

THE TACHOGRAPH SOLUTIONS FROM ORDITOO

Time and efficiency gains

TP&H Group from Herentals was looking for a practical solution to download and manage its tachograph data. At OpenICT the company found such a solution: Orditool digiDL.

digiDL

Thanks to Orditool's 'tachograph solution', TP&H Group has cut its number of empty kilometres. Payroll management was greatly simplified too.

Downloading the data from the digital tachograph and the driver cards takes time. Too much time. "We used to be able to do that by hand, but with the expansion of our fleet, which today counts 200 trucks, that activity alone represents a part-time job. After all, you have to reckon on a quarter of an hour per truck and per operation." The speaker is Nathalie Vandijck, HR manager of the TP&H Group.

Fewer empty kilometres

In OpenICT, however, Nathalie Vandijck has found the ideal partner to make the management of the tachograph data run more smoothly. "Today we have already equipped all our new Euro 6 vehicles with the digiDL from OpenICT. In addition we use the Orditool software program to consult the results and to check

parameters such as compliance with driving and rest times. Orditool offers us a perfect overview and speeds up our payroll administration to a large extent." Because TP&H Group renews its fleet at very regular intervals, by the end of the year 80 vehicles (out of 200) will have been equipped with digiDL. "The other big advantage of the system is that we no longer have to wait until the driver calls at the home base before we can have his data", continues Hans Nietvelt, fleet manager. "Previously every driver had to come by here between the 1st and the 10th of the month. That went hand in hand with a great deal of lost efficiency and empty kilometres. The Orditool digiDL solution avoids those unnecessary kilometres and it also allows us to organise the follow-up from several sites." Hans Nietvelt is convinced of it: the combination of

THE ORDITOO SOLUTION

- digiDL hardware that sends the tachograph data to the home base via GPRS
- Orditool program to analyse the data
- Data storage
- Processing of the payroll data

TP&H GROUP

Registered office: Herentals

Fleet: 200 tractor units, 250 trailers

Specialities: international transport, refrigerated transport

the digiDL hardware and the Orditool program pays for itself very quickly. Moreover, it is not only the technical solution that appeals to TP&H Group, but also the mentality of OpenICT: "They understood very well what our core activity is and they proposed the solution that matches our needs. In a world that is dom-

inated by information, that is precisely what we were looking for." Hans Nietvelt shows himself to be a satisfied man.
